**Special Interests:**

Music, Renewable energy, Alternative building techniques, gold mining

**Other (Bio Only):**

FACEBOOK: Eric Treider for Senate

**Statement:**

Here's one portrait of Alaska in 2034: The "fast cash now" guys defeated Prop 1. We drilled the hell out of the Slope but don't have much to show for it. The oil pipeline shut down and we're stuck with much of the clean-up, just like with those Cook Inlet platforms. The gas pipeline barely broke even and most of those profits leave the state. We never set aside any money to develop sustainable industries so those of us who aren't in fishing, tourism or government are struggling to get by. No jobs for the young folks -- they're all gone.

This is my vision of Alaska: Prop 1 passed and we maximized our oil income. We realized that we couldn't keep supporting a state government that cost \$72,000 per year, per family so we began making hard choices. Using these savings and the extra oil money, we transformed Alaska into a renewable energy powerhouse. It took a "Manhattan Project" effort but we developed employee-owned companies that design and build tidal power and wind turbines, solar panels, and integrated systems that are badly needed in Alaska and all over the world. It's a stable, enduring industry that strengthens small businesses in ways that petroleum couldn't because the profits stay here at home. And the cheap electricity we produce is a relief for businesses and families and it launched local agriculture. World-wide, people say, "Alaska! The energy folks! They planned ahead and got it right!"

Let's make this dream come true!
